

Sarah Wilson — Principal Engineer

Summary

15 years of experience in distributed systems, database internals, and technical leadership. Published 12 papers on consensus protocols.

Experience

Principal Engineer at BigTech, 2019-2024. Architected the real-time event processing pipeline handling 50 billion events per day. Led a team of 25 engineers across three continents.

Staff Engineer at MidCorp, 2015-2019. Redesigned the core storage engine resulting in 40 percent latency reduction. Mentored 8 junior engineers, 5 of whom were promoted within 2 years.

Senior Engineer at StartupX, 2012-2015. Built the initial data pipeline from scratch. Implemented automated testing reducing production incidents by 60 percent.

Software Engineer at ConsultCo, 2009-2012. Delivered 15 client projects across finance, healthcare, and government sectors.

Education

MSc Computer Science, Stanford University, 2009. Thesis: Fault-tolerant distributed consensus in partially synchronous networks.

BSc Mathematics, University of Cambridge, 2007.

Publications

Wilson et al. 2023. Adaptive consensus for geo-distributed databases. Proceedings of VLDB.

Wilson et al. 2021. Practical Byzantine fault tolerance at scale. ACM Computing Surveys.
